**Finnish comments on CPR 09/5/1 '(Draft) Guideline for the use of the EAD format'.**

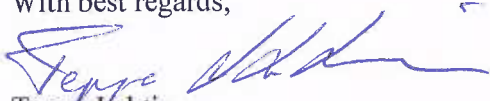

Finland can accept the content of the CPR 09/5/1.

However, there is a need to have further discussion in SCC and may be a FAQ has to be prepared.

Clauses 10 (external fire performance), 11 (fire performance of facades) and 12 (dangerous substances) allow the manufacturers to perform the test according to the test method valid in those EU countries, where the manufacturer intends to make the product available on the market. We can support this approach since in the near future there will be no better solution available.

However to avoid the misuse of the product it is necessary to give indication in the DoP which were the EU countries where the manufacturer originally intended to make the product available on the market. Agreement is needed in SCC how this indication shall be given in a coherent way.

With best regards,

Teppo Lehtinen

Head of the Finnish Delegation to SCC
